Health and Safety Annual Report — 2025

Document ID: EN-REP-06 **Department:** Health, Safety and Environment **Reporting Period:** Calendar Year 2025 **Prepared By:** HSE Department **Distribution:** Internal — Executive Committee and Board Health & Safety Committee

1. Executive Summary

This report summarises health and safety performance across all Meridian Holdings Group sites during 2025. The Company recorded a Lost Time Injury Frequency Rate (LTIFR) of 2.1 per 200,000 hours worked, an improvement from 2.8 in 2024. There were no fatalities or RIDDOR-reportable major injuries during the year. Two incidents required regulatory notification due to hospital admission of the affected employee.

2. Incident Statistics

Metric	2025	2024	Change
Total recordable incidents	34	41	-17%
Lost time injuries	12	16	-25%
LTIFR (per 200,000 hours)	2.1	2.8	-25%
Near-miss reports	187	152	+23%
Fire drills completed	24	22	+9%

2.1 The increase in near-miss reporting is regarded as a positive indicator, reflecting improved safety culture and reporting confidence following the near-miss reporting campaign launched in Q1 2025, rather than an increase in underlying risk.

3. Incident Categories

3.1 Manual handling injuries accounted for 42% of recordable incidents, remaining the most common incident category, consistent with prior years. Slips, trips, and falls accounted for a further 26%.

3.2 Two incidents in 2025 involved forklift operations, both resulting in property damage with no personal injury; both are detailed further in the associated

Quarterly Operations Reports for the relevant periods (see EN-REP-01 for the Q2 2026 example format).

4. Regulatory Notifications

4.1 Two incidents during 2025 met the threshold for regulatory notification under applicable health and safety legislation due to hospital admission of the injured employee exceeding 24 hours. Both incidents were investigated in full, with corrective actions implemented and verified closed by the HSE Department.

5. Training and Culture Initiatives

5.1 The Forklift Operator Training Manual (EN-MAN-03) was revised in 2025 to include additional pedestrian-awareness content, following analysis of near-miss data indicating pedestrian-forklift interactions as an emerging risk area.

5.2 Fire Warden coverage was expanded in 2025 in line with the Fire Warden Procedures Manual (EN-MAN-07), achieving full compliance with the one warden per fifty employees ratio across all sites for the first time.

6. Priorities for 2026

- Reduce LTIFR to below 1.8 per 200,000 hours worked
- Complete a full review of manual handling procedures across all distribution centres
- Extend near-miss reporting campaign to corporate office locations

7. Approval

Approved by the Board Health & Safety Committee on 15 February 2026.
